

Bonzai 1.6 Release Notes

Overview

1. Bonzai Intranet Administration (BIA) tool now supports localization! French is available as the first language to be supported in BIA and gives administrators the option to configure settings for both French and English separately. The following settings are supported:
 - Incoming/Redirect URLs
 - Search Centre URL
 - Header, Footer, Navigation Term Sets
 - Feedback settings
 - Footer copyright
 - Logos
2. Header, Footer, Intranet Navigation, Term Store and Content Targeting are no longer requested on every page load but are instead loaded from local storage. We've introduced a Cache Key in BIA that, when updated, will request new data from the SharePoint APIs.
3. Bonzai web parts now load faster due to proper paging support. The following web parts, where paging is enabled in web part properties, have been updated:
 - Documents Rollup
 - Locations Directory
 - News Rollup
 - Site Directory
 - Spotlight Rollup
 - Events Rollup
 - Documents Table Rollup
 - Pages Rollup
 - People Listing
4. Branding improvements to show more of Bonzai above the page load:
 - Reduced overall padding throughout.
 - Default width changed from 1084px to 1360px.
 - Navigation, MarketPlace, Employee Directory, and Locations directory now display 4 items per row by default instead of 3.
 - The default loading gif has been replaced with default content placeholders.
 - Image renditions have been updated to reflect the new spacing.

5. Bonzai now offers alternative designs for the following 4 web parts that can be selected within the web part properties:
 - News Rollup
 - Slider
 - Documents Rollup
 - Pages Rollup
6. Bonzai now offers new 4 column page layouts for use with the new 1360px width.
7. A new 2016 Master Page is now provisioned as a part of the bonzai.branding.wsp package.
8. Font Awesome has been upgraded to 4.7. Tabbed web part supports the ability for users to choose the expand/collapse icon.
9. Bonzai now supports a 7th content page layout called Services Page.

Global

1. Term set calls are no longer made on every page refresh. They are now made only on an invalidation of the cache key.
2. Bonzai now supports an additional Language Equivalent column for linking English and French pages.
3. BIA now has localization support. French settings can be entered via the FR link within each settings store.
4. The breadcrumbs no longer display the 'You are here' at the beginning of the line.
5. Switched the Language Equivalent to Single Line of Text to prevent spell checker from kicking in.
6. Bonzai now supports a new languages spoken icon for use throughout the product.
7. Bonzai now supports a language toggle in the master page for switching between locales. The toggle has the following states:
 - Disabled: No Language Equivalent value is set for the current page.
 - Hidden: Localization is not enabled in BIA. The Locale Toggle will now only appear if the "Allow Localized Versions of Store?".
 - Enabled: Language Equivalent value is set for the current page and toggle will redirect to that URL .
8. Bonzai profiles now load the My Sites profile photo using the correct URL regardless of what the My Site web application URL is set to.
9. Content targeting now supports paging and should page correctly when enabled alongside paging.

10. Bonzai now supports the user's timezone and reflects the dates based on what the user has set.
11. Sorting by Modified no longer breaks framework calls.
12. Computer/Desktop or Device time will not affect any dates with Bonzai Web Parts or pages. This behaviour is consistent with SharePoint and Office 365.
13. All Bonzai components that display a date such as web parts or pages now show this relevant to the Site Collection Time or the User Profile Time that is set. This behaviour is consistent with SharePoint and Office 365.
14. Adding square brackets to a term name no longer breaks content targeting.
15. Padding within Bonzai has now been reduced in several areas.
16. Rollup web parts now display a more helpful message when Likes are not enabled on a Pages library.
17. Default width of Bonzai is now 1360px instead of 1084px. Locations Directory, MarketPlace, Employee directory, as well as Nav have been updated to reflect the new 4 column layout.
18. News, Slider, Pages and Documents rollups now support an additional alternate design that can be selected in the web part properties.
19. Search icon for typeaheads now displays in responsive mode.
20. Bonzai now displays content placeholders while actual data is being loaded.
21. Term Store local storage is now cleared when cache key is updated in BIA.
22. MasterPages have been updated to reflect recent changes and a 2016 master page has been created and added to the bonzai.branding.wsp solution file.
23. Partial selections are now being reflected properly in the checkbox, supporting checked, unchecked and partial states.
24. Bonzai sites on Office 365 can now be accessed by external users in the same way as a standard Office 365 site.
25. Paging styles in responsive mode now match desktop mode as our paging display logic has changed.

Content Pages

1. When using Reusable Content in a content region on a page layout, the text no longer has a grey box around it with a grey background.
2. Landing Page content type is now bound when features are activated to prevent the list view threshold error that SharePoint throws when changing a page layout.
3. Pages now work properly even if located within a folder.
4. Service and Location page layouts now support comments.
5. Bonzai now supports new 4 column pages layouts. All page layout icons have been updated.
6. All content types and page layouts now support a Review/Expiry column.
7. Tags field is now located on the Metadata tab and not the Target Options tab.
8. Long Job Titles now properly wrap in the comment section.

9. Content width area now takes up the full real estate and no longer has empty space to the left. Edit and display modes now match in their widths.
10. Generic, Generic Full Width, News and Spotlight page layouts have been updated so that the Author label now reads Posted By in edit mode to be consistent with display mode and other page layouts.
11. Location and Event Page Layouts now hide fields that contain no values.

Event Page

1. When a user selects to attend an event, the calendar invite is now automatically downloaded for them.
2. Time and Location fields now escape special characters properly.

Location Page

1. The Hours field on the Location Page Layout in edit mode is now positioned below the Address field to match what is visible in display mode.

News Page

1. News byline column is no longer displayed in the News page layout edit mode.
2. Pages now work properly even if located within a folder.

Spotlight Page

1. Spotlight Rollup name will now appear even if profile is not found.

Services Page NEW!

1. Bonzai now has a new Page Layout called Service Page that supports metadata for services within an organization.

Header

1. Bonzai now has a Locale toggle in the header that allows users to toggle the language. The Locale toggle will look at the value of the language equivalent column and redirect the user accordingly.
2. Search box no longer has a height in responsive mode so vertical alignment of the 'Search' text should look more normal now.

3. Sign in as a Different User now always displays in the welcome menu.
4. Header Links, Footer Links and Intranet Nav now support the ability to open links in a new window by simply adding the **newWindow** custom property to the term set.

Header Links

1. Header links error text will now display correctly.

Mega Nav

1. Nav now throws a proper error when navigation term set guid is not set properly in BIA.

Stock

1. Stock component now properly displays an error message when an invalid stock is set, both in English and French.

Weather

1. Yahoo weather api has been replaced with Dark Sky.
2. Weather no longer briefly flashes the default weather location before loading the user specific weather location.

Web Parts

Important Messages

1. Important Messages web part no longer flashes when messages are expired.
2. Important Messages now respect content targeting and will also properly continue to display important messages down the stack.

Advanced Links

1. Expand/Collapse buttons no longer show in Advanced Links web part when there are no items to show.

Event Rollup

1. Events Rollup date square is now clickable and will route to the event.

Document Table Rollup

1. The first column in a document table rollup no longer centre aligns and now left aligns like all other columns.
2. The Documents Table rollup web part now properly filters out the Liked By column.
3. Document Table Rollup web part now has the option to show or hide the column headings.

Employee Directory

1. Employee Directory search web part and Locations Directory search web parts now support the ability to add an additional link that points to a URL of the user's choice.
2. Employee Directory Search web part now has a property for enabling/disabling the wildcard character after each search keyword.

Feedback

1. The feedback web part now allows you to specify the placeholder text inside the comments box.

Locations Directory

1. Locations Directory web part does not skew vertically anymore in IE.
2. Locations web part now respects the query string and will filter the results if a value is provided.
3. Locations web part now defaults to no chrome when added to a page.
4. Locations Directory image container now sets the container height before the image loads to avoid the content displacement issue.

MarketPlace Rollup

1. The MarketPlace rollup web part now allows users to enter a site and view like other web parts.
2. MarketPlace Rollup now only requests the items associated with the current view.
3. MarketPlace rollup and MarketPlace index pages now make use of renditions.
4. Default placeholder when there is no image now centers vertically in the MarketPlace Rollup.

People Listing

1. The People Listing web part now supports a table view for displaying the content in a tabular format.
2. People listing web part now allows you to control the column order in the web part properties.
3. The People Listing web part now supports the ability to show or hide the table heading columns via a web part property.
4. Names should now properly wrap below the presence indicator with an indentation.

Slider

1. Slider rollup API now returns the byline in the html display.
2. Slider now loads arrows and content without any jumping effects.

Tabbed

1. The Tabbed web part now supports an accordion mode.
2. CSWP placed inside a tabbed web part should now work properly.
3. CSWP paging now works when placed inside a Tabbed web part.
4. Tabbed web part now supports the ability to specify which font awesome icon you'd like to use in the expand/collapse logic. We have also upgraded to the latest version of font awesome - 4.7.

Favourite Documents

1. Favourite Documents web part now prompts for a site URL and can be used at any scope.
2. Favourite Documents web part now properly displays an error message when placed on a page where no Favourite Documents list is found.

Popular Searches

1. Popular Searches web part now displays proper messaging when either no list is found, or when the list returns no items.

Document Portal

1. Document Portal Search Box now has a property to enable/disable the wildcard search. This is enabled by default.
2. Apostrophes are now displayed correctly in the Document Portal.

3. The Download and Email links on the Doc Portal hover panel are now spaced properly.

Employee Directory

1. Employee Directory search box now reads from the query string and pre-populates if a search parameter exists.
2. MarketPlace and Employee Directory now work when French MUI is active.

Locations Directory

1. Locations Directory typeahead now displays Phone correctly, it was not being displayed before. Also removed reference to Branch Code that does not exist anywhere.
2. The Locations Directory and Location Page layout no longer load an incorrect map with special characters are included in the address.
3. Locations Directory now respects a query string parameter set in the URL and will filter accordingly.

MarketPlace

1. MarketPlace Gone filter will now display the Gone label instead of Expired when an item is both Gone AND Expired.
2. You can no longer submit a MarketPlace item without selecting a location first.
3. MarketPlace and Employee Directory now work when French MUI is active.
4. MarketPlace rollup and MarketPlace index pages now make use of renditions.
5. MarketPlace Rollup and MarketPlace web parts now support a web part property that allows users to select the currency.

Site Directory

1. Site Directory web part now displays a proper error message when added to a page without the Site Directory feature activated.

Display Templates

1. Bonzai now supports a new control display template that shows the result count when selected.
2. Document Portal Content Search Web Part now displays the result count.
